

## Automated Packing Solutions

Automated strapping solutions provide efficient and reliable packaging systems for various industries, including steel, aluminum, wood, and general packaging. These systems offer the flexibility of using PET or steel strapping to secure products during transportation and storage.

### Key Features:

- Automatic PET or steel strapping machines for different product types.
- Versatile configurations: heads can be placed in top, side, horizontal, or bottom positions.
- Easy maintenance access with fixed or mobile machine options.
- Strapping with or without protective elements such as bunks or corner protectors.
- Integration with additional systems like conveyors, robots, and turning tables.

### Benefits:

- High-speed operation with multiple heads for fast packaging.
- Consistent strap tension for improved product stability.
- Wide range of head sizes for various applications, with both vibration and seal-based strapping.
