

## Fall Arrest Lanyards

- Fall Arrest Lanyards are critical safety tools designed to prevent falls and reduce the impact force when working at height. Commonly used in construction, roofing, and industrial environments, these lanyards connect a worker's harness to an anchor point, ensuring safety during a fall. They come in various lengths and designs to meet specific job site needs, often featuring energy-absorbing components and secure connectors.

### Fall Arrest Lanyards

#### 3M™ Protecta® PRO™ Shock Absorbing Lanyards

- Energy Absorbing Design reduces fall arrest forces.
- Available in various webbing materials and lengths.
- Impact Indicator alerts users if the lanyard has been deployed.

#### 3M™ DBI-SALA® Energy Absorbing Lanyards

- Controlled Tearing Action activates during falls to manage arrest forces.
- Includes RFID for easy inventory management.
- Protected Labels for durability.

#### 3M™ DBI-SALA® Swiveling Chain Rebar/Positioning Lanyard

- Ideal for work positioning with Twist Link Chain Construction.
- Self-Locking Aluminum Rebar Hook with swivel for easy use.
- Equipped with 3M™ Connected Safety ID (CSID) for tracking.
