

Feet Plows

Designed for fast, efficient, low-maintenance operation in the harshest of winter conditions, FleetPlow keeps your trucks where they need to be - on the road. Join the growing number of fleet professionals who put their trust in FleetPlow's patented, rooftop snow plows from Scraper Systems.

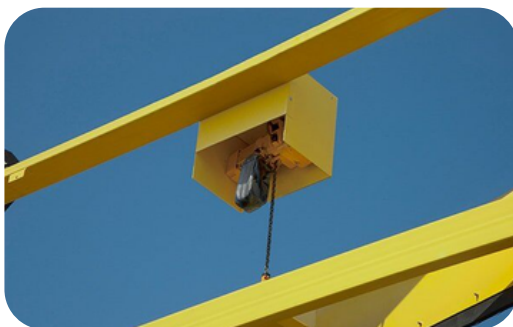

True Portability

Our portable fleet plow snow removal machines are mounted to a rollable chassis frame, and can be repositioned to different locations within your facility. They're fast and efficient, and make it easy to reclaim space in your shipping yard after the winter season has passed.

Deep-V Plow Handles Two Feet of Snow Easily

The deep-V plow blade on our Heavy-Duty scraper systems is over 13' wide and discharges up to 24" of deep, heavy, wet snow off both sides of the trailer. Even in uneven terrain, the pliable rubber edge of the plow blade remains in constant contact with the trailer tops thanks to our Accu-Track™ guide system. And it is safe to use on translucent roofs.

Powered Height Adjustment

Depending upon the model, standard fleet plow scraper systems clear from 6 foot - 3" vans to 14-foot-high trailers and coaches with the touch of a button. The plow assembly is powered by an extreme-duty chain hoist for Heavy-Duty situations and a wire hoist to meet Medium-Duty needs.
