

Self-Retracting Lifelines (SRLs)

 Self-Retracting Lifelines (SRLs) are essential for fall protection in industries like construction, mining, and maintenance. These devices consist of a retractable cable or webbing housed in a durable casing, connecting a worker's harness to an anchor point. As the worker moves, the line retracts and locks instantly if a fall occurs, reducing the fall distance and impact forces.

Key Benefits

- Enhanced Safety: Limits fall distance, reducing injury risks.
- Increased Mobility: Automatically retracts excess line, ensuring freedom of movement.
- Compact & Lightweight: Easy to wear, stays out of the way.

3M™ DBI-SALA® Sealed-Blok™ SRL

- Durable Construction: Stainless steel cable, IP69K rating for dust, water, and temperature resistance.
- Quick Braking System: Activates instantly in a fall.
- Sealed Design: Protects components from environmental exposure.

3M™ DBI-SALA® Nano-Lok™ Edge SRL

- Compact Design: Ideal for foot-level tie-off and leading edge applications.
- Quick Locking: Stops falls within inches.
- Built-in Connector: Attaches directly to harness, reducing trip hazards.

3M™ DBI-SALA® Nano-Lok™ Extended Length SRL

- Extended Length: Available up to 20 ft (6 m) for more coverage.
- Impact-Resistant Housing: Withstands harsh worksites.
- Tension Maintenance: Prevents dragging and trip falls.
