

## Sun Controls

Sunshades are architectural elements designed to reduce solar heat gain while enhancing the aesthetic appeal of buildings. These systems can be mounted horizontally or vertically, providing shade, reducing glare, and offering a sleek, modern look. They are commonly used for solar control and as decorative accents.

### Features:

- Horizontal or vertical blade configurations
- Options for lighting and custom designs
- Durable, weather-resistant materials
- Energy-efficient design
- Easy installation

### Benefits:

- Reduces cooling costs by minimizing solar heat gain
- Improves occupant comfort by reducing glare
- Enhances the building's visual appeal
- Provides sustainable, energy-saving solutions
- Customizable for various architectural needs

### Applications:

- Exterior shading for windows and facades
- Decorative accents for building exteriors
- Vision barriers for privacy and shading
