

Van Flooring

Overview

Van flooring is a crucial aspect of any vehicle upfit, offering a stable, grippy, and safe foundation for transporting tools, goods, and equipment. With a variety of flooring options available, each designed for specific needs, you can ensure your van is well-equipped to handle daily wear and tear while maintaining safety and efficiency on the road.

Key Features

- **Anti-Slip Surface:** Floors are designed to maximize grip, significantly reducing the risk of slips and falls, especially in wet or hazardous conditions.
- **Durability:** Engineered to resist impacts, moisture, chemicals, and extreme temperatures, ensuring a long lifespan and reduced maintenance costs.
- **Efficiency:** Flat, even surfaces make loading and unloading easier, saving time and improving overall productivity.
- **Eco-Friendly:** Many flooring options are made from recycled materials, contributing to sustainability efforts while maintaining performance.
- **Professional Appearance:** Easy to clean and maintain, these floors help keep your van looking neat and presentable for clients.

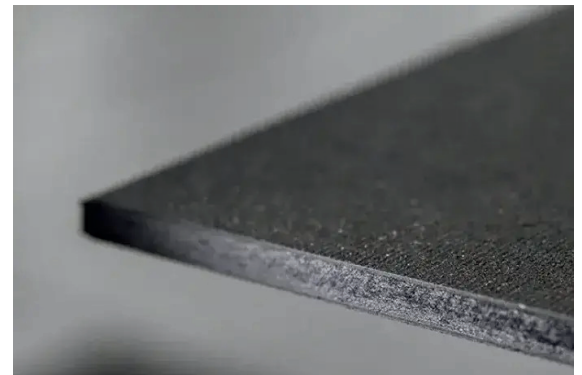

StabiliGrip Flooring

- **Material:** Composite rigid floor with fiber-mesh inlay and rubberized textured surface.
- **Benefits:** Impact resilient, moisture-resistant, rot-proof, and resistant to extreme temperatures. Provides maximum grip and durability for everyday use.
- **Features:** Made from 75% recycled material, easy to install, and includes a rail joint to eliminate trip hazards.

Evolve Flooring

- **Material:** Lightweight, no-drill rigid floor for electric vehicles (EVs).
- **Benefits:** 53% lighter than plywood, maximizing vehicle battery efficiency without compromising protection.
- **Features:** 75% recycled material, no drilling required, and designed specifically for EVs. Ideal for last-mile delivery and urban fleets.

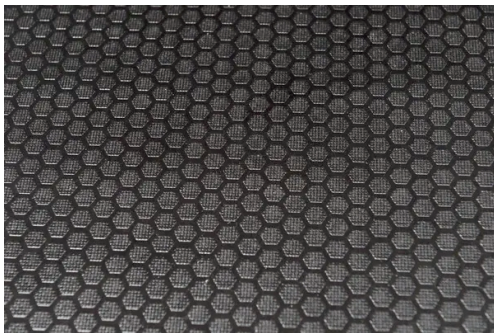

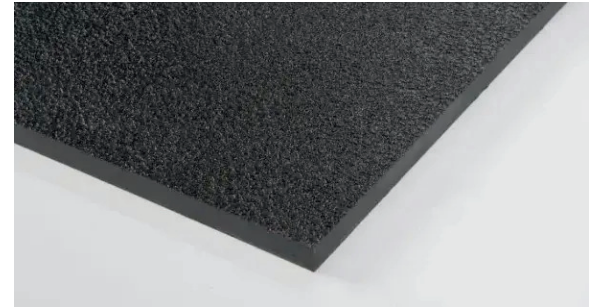

HD UltraFloor

- **Material:** 100% recycled plastic composite, corrosion-resistant, and rigid.
- **Benefits:** Extremely durable, liquid-resistant, and non-porous to eliminate bacteria and mold formation.
- **Features:** Endures extreme temperatures and resists cracking or splitting, adding value to your vehicle at the end of its lease.

HD UltraGrip Flooring

- **Material:** Rubber-coated composite plastic with an anti-slip surface.
- **Benefits:** Offers superior grip for worker safety and prevents cargo from shifting. Non-porous surface resists liquid, bacteria, and mold.
- **Features:** Combines a rigid floor with rubber matting for the most cost-effective option.

KK-Plus Flooring

- **Material:** 1/2" thick birch plywood with a phenolic resin textured coating.
- **Benefits:** Stable and durable in all weather conditions, providing long-lasting performance with low expansion and contraction.
- **Features:** Offers a high-quality, stable construction for varied climates.

Benefits of Installing Van Flooring

- **Safety:** Anti-slip surfaces reduce slip and fall risks, ensuring a safer working environment.
- **Durability:** Resistant to impacts, chemicals, and moisture, extending the lifespan of the flooring.
- **Efficiency:** A flat, even surface enhances loading and unloading efficiency, reducing physical strain.
- **Professional Appearance:** Keeps your van clean, maintaining a neat and professional look for clients.
- **Eco-Friendly:** Many flooring options use recycled materials, supporting sustainable business practices.
